

## General Document

The making of website is mainly classified in following way

- 1) Static Website
- 2) Dynamic website
- 3) E - Commerce Website

### Static Web Site:

Static Websites are completely informative website with no interaction with user. These websites are used only when same content is supposed to be shown to all users. It will be same for every one. Static websites has only one vertical. Saying this these kind of websites also cover good amount of internet area.

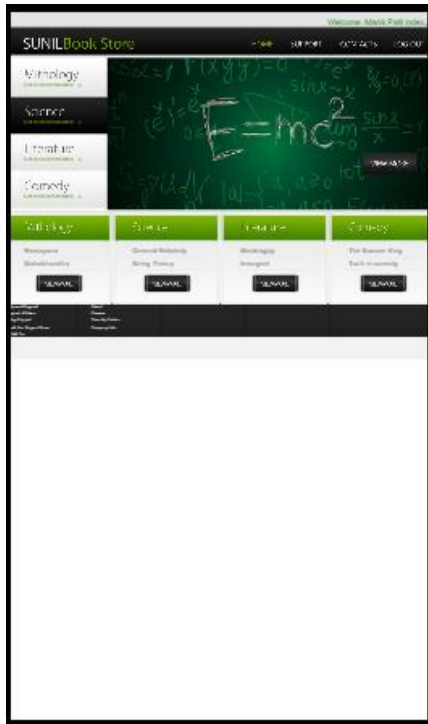

**Responsiveness :** To make these websites compatible to all the devices be it Mobile phones, Tablets or Desktops, it making needs to be done with responsive technology.

#### Static Website View on Desktop

Here we can see the static non responsive webpage completely the way we wants it to look on desktop. But when this is view on mobile it doesn't suits our taste.

Static web pages non responsive page on a mobile:

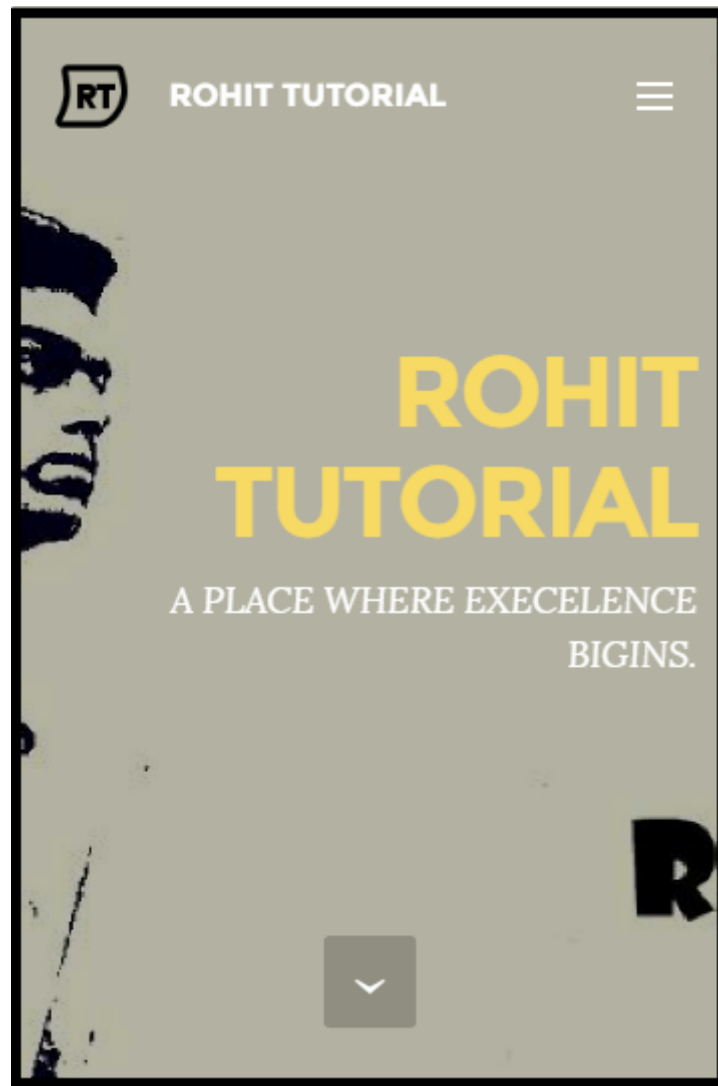

Here we can see the website is not compatible to mobile version because its not responsive. Each and every time we want to click or type we have zoom in to it and proceed. This seems to be very TEDIOUS!!.

## **Dynamic Website :**

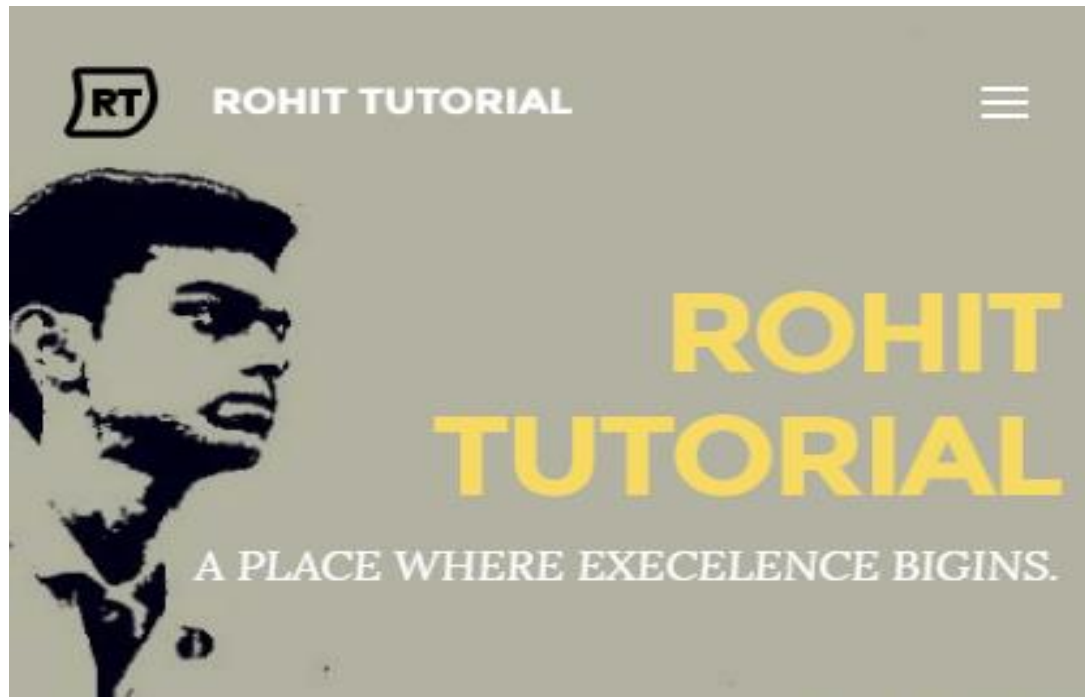

This websites are interactive web pages, which includes server side programming to make it interactive. The content of dynamic web page can be kept different for different users. It include various methods to interact with user and responds in a interactive way.

This include various login form, registration forms, contact forms etc

Dynamic responsive web page on Mobile :

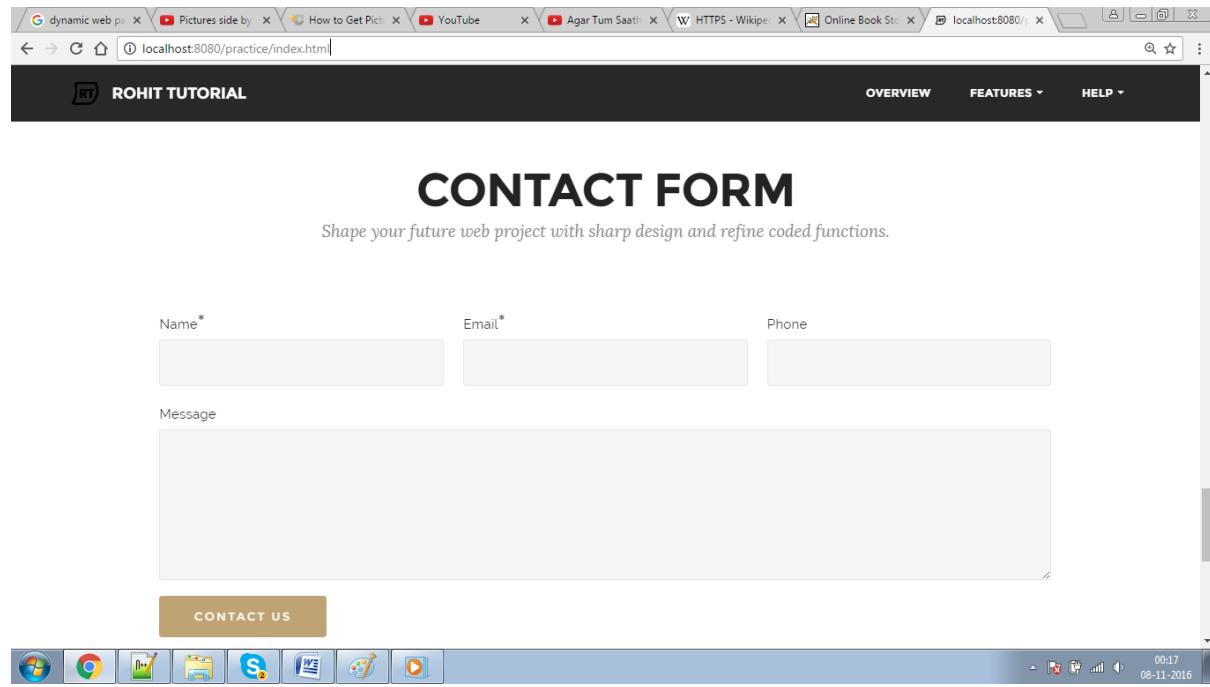

### Dynamic responsive website on Tablet

### Dynamic Website on Desktop :

## **E- Commerce Website :**

These websites are dynamic website with functionality of electronic Commerce (Online shopping).
